1. What is EUFLEXXA?

EUFLEXXA is a hyaluronic acid (HA) that’s injected directly into the knee by your healthcare provider for the treatment of osteoarthritis (OA) knee pain. It is sometimes called a “gel shot for the knee.”

If simple pain medications aren’t giving you the relief you need, talk to your healthcare provider about EUFLEXXA.

2. What should I know about EUFLEXXA?

EUFLEXXA closely resembles healthy HA in the knee. It’s created with a precise, multi-step cleansing and filtering process that results in a highly purified viscous fluid. It’s also animal free.

3. How do I know if EUFLEXXA is a good option for me?

If you experience OA knee pain while walking, climbing stairs, sitting, standing, or even resting at night, and simple pain medications and/or physical therapy or exercise no longer have the same effect, then speak with your healthcare provider to see if EUFLEXXA may be right for you.

4. How is EUFLEXXA given?

To get the maximum and long-lasting pain relief of EUFLEXXA, your doctor should give you 3 injections of EUFLEXXA. Each injection should be 1 week apart. You may feel some relief from your OA knee pain after the first shot, but a clinical study showed that most patients experience further pain relief with each additional injection in the series.*

*Based on a 12-week, multicenter, prospective, randomized, controlled, double-blind study conducted in adult patients with OA knee pain.

INDICATION

EUFLEXXA (1% sodium hyaluronate) is used to relieve knee pain due to osteoarthritis. It is used for patients who do not get enough relief from simple pain medications such as acetaminophen or from exercise and physical therapy.

EUFLEXXA is only for injection into the knee, performed by a doctor or other qualified healthcare professional.

IMPORTANT SAFETY INFORMATION

• Do not take this product if you have had any previous allergic reaction to EUFLEXXA or hyaluronan products.

Please see Important Safety Information throughout and Full Prescribing Information on pages 5 and 6.
FREQUENTLY ASKED QUESTIONS (CONTINUED)

5. After receiving EUFLEXXA injections, how long can I expect my pain relief to last?

When you get all 3 injections, clinical studies show that EUFLEXXA may help provide pain relief for up to 6 months.* Each injection counts when it comes to helping keep your knees relieved from pain and stiffness. Be sure to get all 3 injections to get the full benefit of your treatment.

6. What were the clinical study results for patients who have taken EUFLEXXA?

EUFLEXXA was shown to be comparable to another HA product in a 12-week head-to-head clinical study that included 321 patients.† 62% of the patients in the study experienced pain improvement with EUFLEXXA (P<0.0001) vs 55% with the other product (P<0.0001).‡ After 3 injections, patients who received EUFLEXXA experienced significantly less pain associated with 5 basic functions (climbing stairs, walking, standing, sitting, and resting during the night). At the end of the 12-week study, 2 out of 3 (63%) patients who received EUFLEXXA were pain free, and 8 out of 10 (81%) patients treated with EUFLEXXA reported that they were satisfied with the reduction in OA knee pain.§

*As shown in a 26-week, randomized, double-blind, saline-controlled study of 588 patients (ITT population) with OA knee pain.
† Questions based on the Western Ontario and McMaster Universities Osteoarthritis Index (WOMAC). WOMAC is an internationally recognized and widely used set of standardized questionnaires that allows healthcare providers to assess the condition of patients with osteoarthritis of the knee and hip. Measures include pain, stiffness, and physical functioning of the joints.
‡ Improvements from baseline were statistically significant for both treatment groups.
§ In the 12-week study, side effects caused by EUFLEXXA were joint pain (11/160), increase in blood pressure (3/160), joint swelling (3/160), feeling of sickness of injection (3/160), tingling (2/160), back pain (1/160), joint effusion (1/160), nausea (1/160), skin irritation (1/160), and tenderness in study knee (1/160).

IMPORTANT SAFETY INFORMATION (continued)

• You should not have EUFLEXXA injected into the knee if you have a knee joint infection or skin diseases or infections around the injection site.

Please see Important Safety Information throughout and Full Prescribing Information on pages 5 and 6.
7. Can both my knees be treated with EUFLEXXA at the same time?
   Yes. Ask your healthcare provider what will work best for you. If you have pain in both knees, also known as bilateral OA, get 3 weekly injections in each knee to get the full benefit of EUFLEXXA.

8. Will the injections hurt?
   While injection pain is individual, your physician may discuss with you and provide you with options to numb the knee before EUFLEXXA is given to offset any potential discomfort.

9. What should I do after my injections?
   Avoid any major physical activity for 48 hours after your injection, including standing on your feet for over an hour. Ice your knee if you experience any swelling or pain. If you experience joint pain, back pain, limb/muscle pains or swelling, or if you have any other problems, call your healthcare provider. Regardless of whether you experience discomfort after the first injection, you should still get all 3 injections to help achieve maximum pain relief.*

10. What are the side effects of EUFLEXXA?
    The most common adverse events reported in a clinical trial of EUFLEXXA were joint pain, back pain, limb pain, muscle pain, and joint swelling.

11. When should I follow up with my healthcare provider?
    Follow up with your healthcare provider at 6 months† to discuss the result of your treatment (ie, relief from OA knee pain) and whether you would benefit from retreatment with EUFLEXXA.

* Based on a 12-week, multicenter, prospective, randomized, controlled, double-blind study conducted in adult patients with OA knee pain.
† Extended treatment was verified in a multicenter, open-label, 26-week trial (N=433).

IMPORTANT SAFETY INFORMATION (continued)

• EUFLEXXA has not been tested in pregnant women, women who are nursing or in children less than 18 years of age. After you receive your EUFLEXXA injection you should avoid physical activities for 48 hours such as jogging, tennis, heavy lifting, or standing on your feet for a long time (more than one hour at a time).

Please see Important Safety Information throughout and Full Prescribing Information on pages 5 and 6.
12. What types of healthcare providers treat with EUFLEXXA?
Mostly specialists treat OA knee pain with EUFLEXXA. Specialists who give EUFLEXXA may include orthopedic surgeons/orthopedists, rheumatologists, sports medicine physicians, pain management specialists, physiatrists (rehabilitation physicians), nurse practitioners, and physician assistants.

13. How do I know if my insurance covers EUFLEXXA?
EUFLEXXA has broad commercial coverage and is covered under Medicare Part B. Your healthcare provider’s office will verify your insurance coverage for you. You can also visit euflexxa.com for more information. If your plan doesn’t cover EUFLEXXA, your physician’s office can provide details on how you can buy EUFLEXXA directly.

14. Does EUFLEXXA offer a patient support program?
Yes, the EUFLEXXA patient support program provides helpful information like appointment reminders, tips for after your injections, scheduling follow-up appointments, and more. Just text HAPPY to 973-355-7159 from your smartphone to enroll.

IMPORTANT SAFETY INFORMATION (continued)
• The most common adverse events related to EUFLEXXA injections were joint pain, back pain, limb pain, muscle pain, and joint swelling.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.FDA.gov/medwatch or call 1-800-FDA-1088. You may also contact Ferring Pharmaceuticals Inc. at 1-888-FERRING.

Please see Important Safety Information throughout and Full Prescribing Information on pages 5 and 6.
The most common adverse events related to EUFLEXXA injections reported in the clinical studies are...
WHAT SHOULD I DO AFTER RECEIVING A EUFLEXXA INJECTION?

- Avoid physical activity, for 4 hours following the injection to keep your arm in a comfortable position.
- Fast
- Take your normal medications unless otherwise instructed by your doctor.
- Do not drink alcohol for at least 4 hours after injection.
- You should ask your doctor when you should begin physical activities again.

WHAT DO I CALL MY DOCTOR (THE PHONE NUMBER)?

If you have any questions or problems, talk to your doctor.

Please call 1-888-FERRING if you have any questions or problems, talk to your doctor. If you would like more information on EUFLEXXA, please call 1-888-FERRING.

WHAT OTHER NON-SURGICAL TREATMENTS ARE AVAILABLE FOR OSTEARTHRITIS?

If you have osteoarthritis, there are other non-surgical treatment options available.

The medical study involved 321 patients with knee pain due to osteoarthritis. The study compared EUFLEXXA to saline in subjects with chronic osteoarthritis of the knee. The intervention consisted of 3 disposable syringes per carton.

PAIN, STIFFNESS AND FUNCTION OF THE KNEE JOINT AND PATIENTS’ AND DOCTORS’ GLOBAL ASSESSMENTS OF WOMAC (PAIN, JOINT STIFFNESS, DISABILITY) WERE IMPROVED IN THE EUFLEXXA GROUP COMPARISON TO THE SALINE GROUP.

The study compared EUFLEXXA to saline in subjects with chronic osteoarthritis of the knee. The intervention consisted of 3 disposable syringes per carton.

WHAT ADVERSE EVENTS WERE OBSERVED IN THE CLINICAL STUDIES?

The following are the most common adverse events and symptoms that were observed in EUFLEXXA group than the saline group.

- The difference was 6.6 mm, whereas the saline group improved 18.5 mm.
