What should I expect from treatment with EUFLEXXA?

- Some people experience moderate pain relief after the 1st or 2nd injection of EUFLEXXA.2
- Most people experience significant relief after the 3rd (last) injection.2
- For maximum pain relief, be sure to get all 3 injections.2
- When it comes to duration of pain relief, each person is different. In general, 1 course of 3 EUFLEXXA injections has been shown to provide up to 6 months of knee pain relief.2
- The most common adverse events related to EUFLEXXA injections were joint pain, back pain, limb pain, muscle pain, and joint swelling.2

Please see Important Safety Information on back cover and Full Prescribing Information in pocket.

IMPORTANT SAFETY INFORMATION

- Do not take this product if you have had any previous allergic reaction to EUFLEXXA or hyaluronan products.
- You should not have EUFLEXXA injected into the knee if you have a knee joint infection or skin diseases or infections around the injection site.
- EUFLEXXA has not been tested in pregnant women, women who are nursing or children less than 18 years of age. After you receive your EUFLEXXA injection you should avoid physical activities for 48 hours such as jogging, tennis, heavy lifting, or standing on your feet for a long time (more than one hour at a time).
- The most common adverse events related to EUFLEXXA injections were joint pain, back pain, limb pain, muscle pain, and joint swelling.

Please see enclosed Full Prescribing Information in pocket.
What should I do after receiving an injection of EUFLEXXA?

• Avoid physical activity for 48 hours after receiving your EUFLEXXA injection
• Ice your knee if you have any mild pain or swelling near the injection site
• Avoid standing on your feet for more than 1 hour at a time during the first 48 hours following the injection
• Ask your healthcare provider when you should begin major physical activities again
• Call your doctor immediately if you experience joint pain, back pain, limb/muscle pain, joint swelling, or any other problems

HAppy refers to happy knees.
**WHAT IS EUFLEXXA USED FOR?**

EUFLEXXA is a hyaluronan product for the treatment of osteoarthritis of the knee joint. It is administered by a doctor or other qualified health professional as a single intracompartmental injection into the knee joint. EUFLEXXA is indicated for the treatment of pain in osteoarthritis of the knee joint. The indications for EUFLEXXA are based on a 12-week multicenter clinical study and a 26-week extension study.

**INDICATION**

- **Osteoarthritis of the Knee Joint**
  - EUFLEXXA is indicated for the treatment of pain in osteoarthritis of the knee joint.
  - EUFLEXXA is given by an injection directly into the knee joint by a doctor or other qualified health professional.
  - EUFLEXXA is administered as a single intracompartmental injection into the knee joint. The injection is administered by a doctor or other qualified health professional.

**DESCRIPTION**

- **Active ingredient**
  - EUFLEXXA contains sodium hyaluronate (1% sodium hyaluronate).
  - EUFLEXXA is an 8.5 mg/mL solution of sodium chloride and benzalkonium chloride.

**WARNINGs**

- **Joint Effusion**
  - EUFLEXXA is contraindicated in patients with joint effusion.
  - EUFLEXXA is not given to patients with joint effusion.

**PRECAUTIONS**

- **Pediatric Use**
  - EUFLEXXA has not been tested in children less than 18 years of age.

**ADVERSE REACTIONS**

- **Most common adverse events**
  - Arthralgia
  - Joint swelling
  - Joint effusion

**Clinical Results**

- **Comparison with saline**
  - The safety and effectiveness of EUFLEXXA as a treatment for pain in OA of the knee was investigated in a 12-week multicenter clinical study and a 26-week extension study.
  - EUFLEXXA subjects had pain relief and functional improvement lasting up to 6 months.

  - EUFLEXXA subjects had pain relief and functional improvement lasting up to 6 months.
**WHAT SHOULD I DO AFTER RECEIVING A EUFLEXXA INJECTION?**

- Avoid physical activity, for 8 hours following the injection, to keep the affected knee from swelling.
- Do not stand on your feet for more than one hour at a time during the first 48 hours following your injection of EUFLEXXA.
- You should ask your doctor when you should begin physical activities again.

**WHEN SHOULD I CALL MY DOCTOR (TROUBLESHOOTING)?**

- Stiffness, swelling or warmth in or around the knee
- Pain in the knee or at the injection site
- Infection in the area of your knee
- Slight bleeding from the injection site
- Appearance of a verruca (wart) at injection site
- An allergic reaction to the medication
- A severe headache
- A sudden change in pain, swelling, or redness in your knee
- A change in pain, swelling, or redness in the knee that is not better in 3 days
- A change in pain, swelling, or redness in the knee that is not better in 1 week
- Severe knee pain not better in 2 weeks
- Swollen lymph nodes
- Difficulty swallowing
- Severe shortness of breath
- Severe chest pain or pressure
- Severe or persistent dizziness or lightheadedness
- Change in speech,
- Change in vision,
- Unusual bleeding or bruising,
- Severe heartburn or indigestion,
- Difficulty walking
- Absence of pain, swelling, redness, or warmth in your knee

**WHAT ELSE SHOULD I KNOW?**

- EUFLEXXA is a non-drug treatment.
- Corticosteroids that are injected directly into the joint can be prescribed by your healthcare provider to help reduce pain and swelling in your knee.
- Non-drug treatments include:
  - Weight loss (if overweight)
  - Exercise
  - Avoiding activities that cause pain in your knee
  - Application of ice to reduce swelling.
  - Use of an elastic bandage or brace (if prescribed by your healthcare provider)

**HOW SUPPLIED**

- Solution for injection: EUFLEXXA is a clear, colorless solution for injection.
- EUFLEXXA is a solution for injection that is supplied in a single-use unit-dose syringe containing 2 mL of EUFLEXXA in 0.9% aqueous sodium chloride (0.17 mg/mL)。“

**HOW TO REHYDRATE EUFLEXXA**

1. Each package of EUFLEXXA is manufactured using aseptic filling techniques. Do not use if the blister package is open or damaged. Store in the original package at 2º-25ºC (36º-77ºF).
2. Protect from light. Do not freeze.
3. Do not use EUFLEXXA if the package is open or damaged. Store in the original package at 2º-25ºC (36º-77ºF).

**RECOMMENDATIONS FOR PATIENTS WITH OSTEOPOROSIS**

Patients with osteoporosis should use caution when receiving EUFLEXXA, as EUFLEXXA is not recommended for patients with severe osteoporosis. Patients with osteoporosis should consult with their healthcare provider before receiving EUFLEXXA.
